

Usman Hassan

Software Engineer | Backend Focus

me@usmangurowa.dev | +234 813 922 3164 | Abuja, Nigeria

usmangurowa.dev | GitHub | LinkedIn

Summary

Software engineer focused on APIs, data and integrations. At Levenza, build backend services and AI-agent integrations spanning device sessions, email attachments and workflow reliability. Earlier work includes payments, wallets and payouts across mobile and web products, with frontend experience that informs API delivery.

Skills

Languages and runtime: TypeScript, JavaScript, Python, Node.js, Bun

APIs and data: Hono, Express.js, Drizzle, Prisma, PostgreSQL, Redis, Supabase, Firebase

Auth and services: Better Auth, Vercel AI SDK, Stripe, Paddle, Resend

Infrastructure and tests: Docker, Coolify, Cloudflare Workers, Infisical, Vitest, Playwright

Experience

Software Engineer — Levenza | Mar 2025 – Present

- Implemented device-session management across settings interfaces and backend APIs, including individual and bulk device sign-out.
- Extended AI-agent workflows to process email attachments, including PDFs, images and meeting invitations, for Slack and Microsoft Teams integrations.
- Improved agent observability with failure telemetry, integration tests and workflow-replay coverage.

Software engineering lead — GenzTechies | Aug 2022 – Present

- Build and maintain the community's web applications, implement features and resolve bugs.

Software engineer — Brimble | Aug 2022 – Early 2025

- Implemented authentication and validation flows, and integrations with GitHub, Google and Firebase.

Software engineer — Yusra | Mar 2024 – Dec 2024

- Built and shipped mobile and web applications for a brand-wallet shopping and rewards product.
- Worked across React Native, Expo, Next.js, PostgreSQL and Supabase on the mobile and web product.

Hardware engineering intern — Terrahaptix | Sep 2024 – Dec 2024

Full-stack developer — Chimoney | Mar 2024 – Jun 2024

- Built payments, wallets and payouts features across mobile and web applications.
- Shipped features iteratively as part of an agile engineering team.

Mobile developer — Goalr | Jul 2023 – Mar 2024

- Integrated Apple Health, Strava, Garmin and Google Fit to track walks, runs and rides.

Backend Engineer — Aviato | 2023 – 2024

Mobile developer — Scrim | 2022 – 2023

- Contributed to the web application and API integrations for payments, crypto swaps and global transfers.
- Implemented wallets, biometric authentication, secure storage, push notifications and over-the-air updates.

Mobile app developer — EarlyBean | Aug 2022 – Mar 2023

- Built the mobile interface and business logic as the sole mobile developer for a family finance and learning app.

Front-end engineer — Cykmore | Aug 2022 – Jan 2023

- Built front-end features with Vue.js and Nuxt.js, collaborating with other developers on recruitment software.

Software engineer intern — BuildBrothers | 2021 – 2022

- Built web applications at the BuildSpace hub, including WhoDeySell, a local marketplace with price discovery and item swapping.

Selected projects

Silo | 2025 - 2026 | silo.ng

A mobile-first personal finance app with transaction intelligence, fund locking, group savings and bill splitting.

Stack: React Native, Expo, TypeScript, Zustand, Tailwind CSS

Kodo | 2025 - 2026 | kodo.codes

A developer productivity and session tracking platform spanning mobile, web and IDE extensions.

Stack: TypeScript, React Native, Expo, Next.js

Penter | 2023 - 2024 | penter.xyz

A design tool that turns CSV or JSON data into dynamic designs using text, images and colours.

Stack: Next.js, TypeScript, PostgreSQL, Prisma, Tailwind CSS

Education

B.Sc. Computer Science | 2022 – 2025

Taraba State University

Diploma in Computer Science | 2018 – 2021

NACEST — Nigerian Army College of Environmental Science and Technology.

Recognition

1st place, GenzTechies Hackfest (Jul 2022), with SafePal, a missing-person reporting app.
